

HARRISON'S CAVE & SCENIC DRIVE

AKTIV & EVENTYR

Harrison's Cave is a magnificent natural phenomenon, quite in a class of its own. Formed from a particularly beautiful type of crystallized limestone, this stunning cavern is undoubtedly one of the most spectacular natural attractions in the entire Caribbean. Though created over the course of hundreds of thousands of years, Harrison's Cave has only been accessible to the general public for some 15 years. The first recorded history of Harrison's Cave dates back to 1796, but it then lay undisturbed until it was rediscovered in 1970 by Ole Sorenson and developed by the Government of Barbados. After checking in at the Visitors Center, you will be taken into a theatre where you will watch a short film on the formation of Barbados. Then you will board the electric tram that will take you down into the cave. As the driver pulls away, your guide will commence her commentary and you are on your way to a memorable experience - magnificent chambers, incredible stalactites and stalagmites, bubbling streams, tumbling cascades, plunging waterfalls and emerald pools. Throughout the almost mile long cave the flowstone covered walls glisten in the lights as the calcite laden waters drip down from the roof. At various points the tram stops to allow passengers to disembark and have a closer look at the beauty at hand. Just remember how long it has taken for these precious features to form and please do not touch them! One stop takes place at the lowest point in the cave, where a waterfall plunges into an emerald pool. Flash photography is permitted - not video - so take your camera.
